## Assignment - Drow a Class Diagram.

	is for existen class.
0	-for String class!-
	motories .
	String
	- value: byte[]
	- coder: byte
	- hoshIsZero: boolean
	+ length (): int
	+ isEmpty(): boolean
	+ charAtcint): char
	+ getBytes (string): byte[]
	+ equals (object): boolean
	+ equalsIgnoreCase (String): boolean
	+ Compare To (String): int
	+ StartWith (String): boolean
	+ endswith (string): boolean
	+ hashcode (): int
	+ index of (int , int) : int
	+ index of (string): int
	+ lastIndex of (string): int
-	+ substring (int): string
	+ substring (int, int): string
	+ concat (string): string
	+ replace (char, char): string
	+ to Opper Case (): String
	+ to Lower Case (): String
	+ string ()
	+ string (string)
-	

2) for system class

TION O MORE

-	
	System
	Pands.
	+ in : InputStream
	tout: Printstream
	terr: Printstream -
	- lineSeparator: String
	+ current Time Millis (): long
	+ nanotime (): long
	+ lineSeperator() : String
	+ getName (): String () A
	+ getName(): String
	+ exit cint): void do start +
0	+ go gc C): void
	+ load (string): void
	+ load Library (String): void
	+ runfinalization (): vold
	+ getlogger (): logger
	this (this this foxebonit

for: (prote) foxabol +

cours: () and was was as a

3 For Print Stream class.

## Printstream - autoFlush : boolean - trouble : boolean - Formatter: Formatter - charout: outputstreamWritter. - textout : Buffered Writer + Printstream (outputStream) + flush c) : void + closec): void + check Error (): boolean # setterror (): void # clear Error (): void t write (int) : void - write (string): void - wniteln (string): void - new Line(): void + print (boolean) : vold t print (int) : void + print (char) : vold + print (long) : void + println (boolean) : void + println (int) : void + printin (char): void + printf ( string , object ) . Printstream + format (string, Object): Printstream + append (charsequence): Print Stream
